A; Molecule type: protein
A; Residues: 1337-1343 cDCl>
A; Residues: 1337-1343 cDCl>
C; Comment: This inhibitor is able to inhibit all four classes (EC 3.4.21-3.4.24) of endog stertiary conformation, entrapping the proteinase. This results in hydrolysis of its this e and appears to unmask a receptor-specific binding site.
C; Comment: The entrapped enzyme remains active against low molecular weight substrates (EC; Comment: The wide specificity of this inhibitor is attributed to the primary sequence (c); Comment: The wide specificity of this inhibitor is attributed to the primary sequence (c); this of a variety of plasma proteinases, form primary (residues 704-809) and secondary (c)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       F;1-23/Domain: signal sequence #status predicted <SIG>

alpha-2 macroglobulin MUG1 - mouse
C; Species: Mus musculus (house mouse)
C; Date: 28-May-1992 #sequence_revision 28-May-1992 #text_change 12-#
C; Accession: A41185
R; Overbergh, L; Torrekens, S.; Van Leuven, F.; Van den Berghe, H.
J. Biol. Chem. 266, 16903-16910, 1991
A; Title: Molecular characterization of the murinoglobulins.
A; Reference number: A41185; MUID:91358495; PMID:1840592
A; Accession: A41185
A; Status: preliminary
A; Molecule type: mRNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1335

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MEDLINE=99081553;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    VARIANT ILE-1000.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     FOR DIFFERENT PROTEINASES. WHEN A PROTEINASE CLEAVES THE BAIT REGION, A COMPORMATIONAL CHANGE IS INDUCED IN THE PROTEIN WHICH TRAPS THE PROTEINASE. THE ENTRAPED BUXYME REMAINS ACTIVE AGAINST LOW MOLECULAR WEIGHT SUBSTRATES (ACTIVITY AGAINST HIGH MOLECULAR WEIGHT SUBSTRATES (BEDICED). FOLLOWING CLEAVAGE IN THE BAIT REGION A THIOLESTER BOND IS YDDOLYZED AND MEDIATES THE COVALENT BINDING OF THE PROTEIN TO THE PROTEINASE. SUBUNIT: HOMOTETRAMER, WHICH CONSISTS OF TWO PAIRS OF DISULFIDE-LINKED CHAINS.

TISSUE SPECIFICITY: Plasma.

MISCELLANEOUS: CONTRARY TO THE RAT PROTEIN, WHICH IS AN ACUTE PHASE PROTEIN, THIS PROTEIN IS ALWAYS PRESENT AT HIGH LEVELS IN CITCHTATION
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CIRCULATION.
SIMILARITY: TO OTHER PROTEINS OF INCLUDING COMPLEMENT COMPONENTS

Sequence of rat liver alpha 2-macroglobulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Rattus norvegicus (Rat).
                                                                                                                                                                                                                                                                                                                                                                                                                          Biol.
                                                                                                                                                                                                                                    BIOÌ. Chem. 260:14224-14229(1985).

FUNCTION: IS ABLE TO INHIBIT ALL FOUR CLASSES OF PROTEINASES BY A UNIQUE "TRAPPING" MECHANISM. THIS PROTEIN HAS A PEPTIDE STRETCH, CALLED THE 'BALT REGION' WHICH CONTAINS SPECIFIC CLEAVAGE SITES FOR DIFFERENT PROTEINASES. WHEN A PROTEINASE CLEAVES THE BAIT REGION, A CONFORMATIONAL CHANGE IS INDUCADED IN THE PROTEIN WHICH TRAPS THE PROTEINASE. THE ENTRAPED ENZYME REMAINS ACTIVE AGAINST LOW MOLECULAR WEIGHT SUBSTRATES (ACTIVITY AGAINST HIGH MOLECULAR WEIGHT SUBSTRATES IS GREATLY REDUCED). FOLLOWING CLEAVAGE IN THE BAIT REGION A THIOLESTER BOND IS HYDROLYZED AND MEDIATES THE COVALENT BINDING OF THE PROTEIN TO THE PROTEINASE.

SUBUNIT: HOMOTETRAMER, WHICH CONSISTS OF TWO PAIRS OF DISULFIDE-
                                                                                                                                                                                 LINKED CHAINS.
TISSUE SPECIFICITY: Plasma.
INDUCTION: BY INFLAMMATORY STIMULUS THE LEVEL
                                                                            European Bioinformatics Institute.
                                                                                                                                        FIRST INCREASES, THEN DECREASES AFTER A MAXIMUM.
SIMILARITY: TO OTHER PROTEINS OF THE ALPHA-MACROGLOBULIN FAMILY,
INCLUDING COMPLEMENT COMPONENTS C3, C4, AND C5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1414
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1354

J. Biol. Chem. 266:16903-16910(1991).

1. Biol. Chem. 266:16903-16910(1991).

1. FUNCTION: A PROTEINASE ACTIVATES THE INHIBITOR BY SPECIFIC PROTECULASIS IN THE CYSTEINYL-GLUTAMYL INTERNAL THIOL ESTER SITE AND TO A CONFORMATIONAL CHANGE, WHEREBY THE PROTEINASE IS TRAPPED AND/OR COVALENTLY BOUND TO THE INHIBITOR. WHILE IN THE TETREAMERIC PROTEINASE INHIBITORS STERIC INHIBITION IS SUPFICIENTLY STRONG, MONOMERIC FORMS NEED A COVALENT LINKAGE BETWEEN THE ACTIVATED GLUTAMYL RESIDUE OF THE ORIGINAL THIOL ESTER AND A TERMINAL AMINO GROUP OF A LYSINE OR ANOTHER NUCLEOPHILIC GROUP ON THE PROTEINASE, FOR INHIBITION TO BE EFFECTIVE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A2M1_MOUSE

1- Biol. Chem. 266:16903-16910(1991).

1- FUNCTION: A PROTEZINASE ACTIVATES THE INHIBITOR BY SPECIFIC PROTEOLYSIS IN THE BAIT REGION, WHICH, BY AN UNKNOWN MECHANISM LEADS TO REACTION AT THE CYSTEINYL-GLUTAMYL INTERNAL THIOL ESTER SITE AND TO A CONFORMATIONAL CHANGE, WHEREBY THE PROTEINASE IS TRAPPED AND/OR COVALENTLY BOUND TO THE INHIBITOR. WHILE IN THE TETRAMERIC PROTEINASE INHIBITORS STERIC INHIBITION IS SUFFICIENTLY STRONG, MONOMERIC FORMS NEED A COVALENT LINKAGE BETWEEN THE ACTIVAMYL RESIDUE OF THE ORIGINAL THIOL ESTER AND A TERMINAL AMINO GROUP OF A LYSINE OR ANOTHER NUCLEOPHILIC GROUP ON THE PROTEINASE, FOR INHIBITION TO BE EFFECTIVE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SIGNAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PIR; 841185; B41185.
